As of: May 2017

The many options offered by the color palette for ROMA sandwich panel elements gives you numerous creative design options. The basic material used in our panels is sheet steel. The sheet metal is galvanized on both sides and then a plastic color coating is applied.

Other colors and coating systems on request. Standard aluminum sheet is available with RAL 9001 or RAL 9006 polyester lacquer.

The colors listed here (such as 9002) approximate the RAL color standard. Please also note: The color patterns are print reproductions and are only approximations.

Minimum quantities apply for special colors.

Please contact us about availability and delivery date. We look forward to helping you.
